

Shot Gun RatDoor™

The Shot Gun RatDoor™ is a realistic training door that teaches the proper approach, targeting and entrance. This high quality door allows the user to shoot out locksets, hinges or both to gain entry. The door is secured in position until all targets have been defeated. Once each location has been shot, the operator kicks or bumps the door inward. Safety hinges along the bottom edge ensure safe and controlled breaches.

The Shot Gun RatDoor™ can be installed into a structure or used free-standing. The door itself is constructed of structural steel and measures 80" x 34". The frame is also fabricated from structural steel and measures 84" x 40". High strength polymer skin has a heavily textured surface to help reduce the risk of slipping when entering the dwelling.

Door uses low cost wood inserts to represent the locksets and hinges. These wood inserts can be purchased or cut to size onsite.

Catalog #:	Description
TD8036SG-FS	Free-standing Shot Gun RatDoor™ (Includes leg kit)
TD8036SG-BI	Built-in Shot Gun RatDoor™ (Includes 8 mounting tabs)
TD8036SG-WI	Wood insert panel (Used on latch and hinges)
