

RATWINDOW

The RATWindow allows operators to train for window entries without the cost, clean up or hazards that glass windows cause. The window frame is constructed of high strength powder coated steel and the panel is made from nearly indestructible Lexan®. The RatWindow is designed and manufactured to your window size allowing for perfect fit. To use this training aid, the operator first “breaks” the window. The plastic window panel falls to the ground. Next the user must “rake” out the steel shards allowing for a safe entry. After entry is made, the shards and reusable “glass” are easily returned to their original position awaiting the next scenario. These windows make training easy with no replacement glass, no glass fragments, no down time***. Window can be installed into your facility, used free standing with optional leg kit, or wall panel.

Options Available	
Part #	Description
TW3232	32"x32" Reusable Window
TW3636-Glass	36"x36" Window For Use With Glass Panels
TW3648-Glass	36"x48" Window For Use With Glass Panels
TW4040	40"x40" Reusable Window
TW4840	48"x40" Reusable Window
