

HDP11 Long Stroke Hydraulic Door Pusher

The HDP11 Long Stroke Door Pusher is the latest evolution in door pusher technology. This tool features totally redesigned blades that allow operators to exploit even the tightest gaps. The tool can be used on inward, outward, right, and left hand swing doors. The stepped serrations allow the tool to grip the door panel on outward breaches. The HDP11 was designed with 11 inches of throw giving it the capability needed to breach even the most fortified doors in one single push. A high-quality gas spring allows the system to quickly retract giving operators the ability to move to secondary breaches quickly and effortlessly. The hydraulic hose connector is on a swivel allowing the operator to stay outside of the fatal funnel while making the system 100% ambidextrous. Available tool handle allows the operator greater control when setting the tool. The tool handle also allows the HDP11 to quickly be hung on the operators cummerbund, securely stowing the tool for future breaches while also keeping the Breachers hands free for other tasks. Available light mount allows for attachment of any picatinny mounted flashlight for low light operations.

Features:

- Ambidextrous Operation
- 11in throw
- Stepped Blade System
- Air powered quick retract spring
- 10,000 PSI System

Tech Specs

- Weight: 11.6lbs
- Length: 18in
- Width: 4in
- Depth: 4in
- Force: 10,000 Lbs
