

Assault Ramp

Versatile, lightweight and quality tactical ladder.

The Assault Ramp features a lightweight, aerospace-grade aluminum alloy with black anodized armor for a subdued, non-reflective finish. The Assault Ramp's quick-release Rock Locks make it easy to extend and deploy quickly, allowing tactical teams to rush targets faster with more weapons on target.

The Assault Ramp extends from its 6.5-foot storage height in 1-foot increments to a maximum height of 10.5 feet, and features 4-foot wide rungs, allowing two operators to ascend simultaneously.

The Assault Ramp has been specifically engineered for tubular assaults, which involve linear targets like buses, rail cars, small planes and mobile housing units. In addition, the Assault Ramp allows multiple operators to climb over fences, walls, or other obstacles with added speed.

Catalog Number:	TL10-W
Weight	50 lbs
