

User swappable claws to adapt to different hinge sizes.

The Tool is designed so that you can seamlessly slip the tool down over the hinge until it bottoms out, and extract the hinge with ease as the hydraulic pressure sheers the retaining hardware to the jamb and door. After this is repeated for each hinge you can quickly and quietly complete the breach with a haligan, as the door will fall out of the frame.
-US Patent Pending

HHP4
HINGE PULLER

The HHP4 HINGE PULLER Tool was specifically designed to extract cam barrel type hinges from outward swinging SCIF doors.

SPECIFICATIONS:

Nominal Weight:	16.35 LBS
Length:	13.50 IN
Width:	5.75 IN
Height:	3.50 IN
Working Pressure:	10,000
Stroke:	1.50 IN
Force:	2 LBS
